**FOR IMMEDIATE RELEASE**

## **Palm Latest Mobile Industry Leader to Join Open Screen Project**

---

**BARCELONA, Spain — Feb. 16, 2009** — At the GSMA Mobile World Congress, Adobe Systems Incorporated (Nasdaq:ADBE) today announced Palm is joining the Open Screen Project - a broad industry initiative dedicated to enabling standalone applications and full web browsing across televisions, desktops and mobile devices taking advantage of Adobe Flash Platform capabilities. The work of the Open Screen Project will help deliver Adobe® Flash® Player for smartphones on the new Palm® webOS™ platform. The unique capabilities of the web-centric Palm webOS, combined with Flash Player, will enable webOS device users to benefit from the huge amount of Flash based web content for a richer, more complete Internet experience.

“We’re excited that our customers will benefit from the creativity and broad range of Flash content and applications created by the millions of designers and developers using Adobe’s popular tools and technologies,” said Pam Deziel, vice president, software product management, Palm, Inc.

“As an industry innovator Palm will be an important contributor to the Open Screen Project,” said Michele Turner, vice president for Product Marketing, Flash Platform Business Unit at Adobe. “We’re aiming to bring a rich, Flash technology-enabled browsing experience to Palm’s impressive web browser.”

Led by Adobe, the Open Screen Project includes industry leaders working together to provide a consistent runtime environment and user experience across mobile phones, desktops, and other consumer electronics devices. The initiative addresses the challenges of web browsing on a broad range of devices, and removes the barriers to publishing content and applications seamlessly across screens. For more information, visit [www.openscreenproject.org](http://www.openscreenproject.org).

Flash Player for smartphones is expected to be available to handset manufacturers at the end of 2009.

The Palm webOS platform, designed exclusively for mobile use, introduces Palm Synergy™, which brings your information from the many places it resides into one simple, integrated view. (1) webOS also lets you keep multiple applications open and instantly flip from one to another, so you can flow easily between activities without losing your place. It’s designed to be so in sync with your needs that it feels like it’s thinking ahead for you.

### About Flash Platform

Adobe Flash Player is the most widely distributed technology on the web, enabling virtually anyone to view and interact with a vast selection of rich content. With Adobe Flash Player supporting all major operating systems and browsers, the Adobe Flash Platform has become the number one platform for video on the web. Designed as a browser plug-in for smartphone-class devices, Adobe Flash Player for smartphones will provide a full web browsing experience with access to rich web applications, interactive content and videos that users enjoy on the desktop today. Adobe Flash Player is a key component of the Adobe Flash Platform, a complete system of integrated tools, frameworks, clients and servers to develop web applications, content and videos. For more information, visit [www.adobe.com/flashplatform](http://www.adobe.com/flashplatform).

### About Adobe Systems Incorporated

Adobe revolutionizes how the world engages with ideas and information – anytime, anywhere and through any medium. For more information, visit [www.adobe.com](http://www.adobe.com).
