

Deploying a Flex application

Deploy the application

1. From the **Flex Builder** main menu select **Project > Export Release Build**.
2. Select the AdobeODT project.
3. Select the AdobeODT .mxm1 application.
4. Check the **Enable view source** checkbox.

5. Click the **Choose Source Files** button.
6. The output folder should be `srcview`.
7. Click **OK**.

8. The folder to export should be
C:\lcds\jrun4\servers\default\odt\AdobeODT.
9. Click **Finish**.
10. In your computer file structure, navigate to
C:\lcds\jrun4\servers\default\odt\AdobeODT. You will see
three folders: assets, history and srcview. You will also see
AdobeODT.html and AdobeODT.swf.
11. Make sure the **LiveCycle Data Services Server** is started. Start >
Programs > Adobe > LiveCycle Data Services ES 2.5.1 >
Start Integrated LiveCycle Data Services Server.
12. Double-click on **AdobeODT.html**. It should open in a browser window.
 - a. If you get an alert error message, in Flex Builder within the **Navigator**
view, right-click on the **AdobeODT** project and select **Properties**.
 - b. Locate the **Flex Compiler** menu item.
 - c. At the end of the list of compiler arguments add -use-
network=false.
 - d. Click **OK**.
13. From the **Flex Builder** main menu select **Project > Export Release Build** and
keep all the default values.

You will get a notice that the previous version of the build will be overwritten which is desired.

14. In your computer file structure, navigate to
C:\l cds\jrun4\servers\default\odt\AdobeODT
15. Double-click on **AdobeODT.html**.

The application will open in a browser window.
