

Adobe eLearning solution for rapid training

Rapidly create, manage, deploy, and track the effectiveness of highly engaging online training that virtually anyone can access instantly

With this solution, you can:

- Rapidly develop, update, and deliver engaging self-paced training
- Administer formal assessments and surveys, and measure the effectiveness of on-demand presentations
- Measure the effectiveness of course content and analyze training results
- Increase the effectiveness of instructors, and easily conduct virtual classes
- Customize the look and feel of eLearning experiences
- Manage virtually all facets of employee, partner, and customer training
- Enhance your existing corporate user and learning management systems

Organizations today face tremendous financial, logistical, and other challenges when training employees, channel partners, and customers: scarce training resources; complex eLearning solutions that make it difficult for all but technically minded training professionals to develop eLearning courses and curricula; costly custom eLearning solutions that require long development times; potential incompatibilities with existing user and learning management systems; and, of course, bland, lifeless training sessions that fail to produce results because they fail to engage learners.

Cost-effectively transfer maximum knowledge in minimum time

With the Adobe eLearning solution for rapid training, you can overcome these challenges cost-effectively and productively while increasing your ROI through faster training and better results. This solution has what training professionals need to address a wide range of training needs—development of standards-compliant content, on-demand or virtual classroom deployment, and reliable formal assessments and reporting—at a fraction of the time and cost of traditional eLearning systems. It also provides comprehensive curriculum and content management capabilities and integrates with common learning management and user management systems to help reduce application management costs.

Use one solution for all your training needs

Avoid the hassle of dealing with multiple solution offerings. With the Adobe eLearning solution for rapid training, you can build a streamlined, fully integrated training solution that includes Adobe® Acrobat® Connect™ Professional software for virtual classroom sessions; Adobe Presenter for easy Microsoft PowerPoint authoring of self-paced training courses and on-demand multimedia presentations; Adobe Connect Training for creating and managing eLearning courses and curricula; and Adobe Connect Events for managing and tracking users of large online courses.

Rapidly deliver engaging, self-paced training

With this solution, nontechnical subject matter experts can leverage their Microsoft PowerPoint skills to create engaging multimedia experiences. Using their desktop computers and a microphone, trainers can easily add voice-over narration to their content from within PowerPoint. Built-in audio editing tools make it easy to isolate and cut out embarrassing pauses or slurred speech. And integrating rich media such as talking head videos, animations, or simulations is as easy as selecting a command from the Insert menu. Finished courses can be published at the click of a button—courses are automatically converted to the Adobe Flash® format and delivered live or on demand using Adobe Flash Player, which already is installed on more than 97% of Internet-connected desktops worldwide, so learners can access them instantly without cumbersome software downloads, virtually anytime and anywhere.

Administer formal assessments and gauge the effectiveness of courses

With the Adobe eLearning solution for rapid training, trainers don't need an IT department or database administrator to help them assess learners' skills and progress or analyze the effectiveness of their courses. Trainers can integrate quizzes with course content using a range of question types—including short answer, fill-in-the-blank, true/false, matching, and Likert rating scale—add pass/fail criteria, and use question branching and custom audio-visual feedback to guide learners in their progress. Likewise, they can gauge the effectiveness of their content using a simple, web-based interface to generate custom reports that provide slide- and question-level feedback and help pinpoint content that may have to be revised to ensure trainees get the information they need.

Provide instant access to online meetings and virtual classes

Trainers can also use this solution to set up virtual classrooms and conduct cost-effective collaborative training sessions in real time with geographically dispersed instructors and learners, complete with multimedia presentations, software simulations, application sharing, and participant polling. Classroom sessions can be easily recorded for later on-demand viewing and shared through an instructor's dedicated, personal meeting room that can be accessed instantly at any time by anyone using Adobe Flash Player, giving learners the opportunity to review content after the live event is over. And in the case of recurring classes, trainers can considerably reduce preparation time using customizable layouts, which they can save for future sessions, complete with all required content. Because the system supports permissions-based access to course content and meeting room layouts, multiple presenters can share meeting room templates as well as course content and assets, using a fully searchable, centralized content library, which makes it easy to find, retrieve, reuse, and update existing training content.

Customize and manage all facets of online training

A cost-effective training solution enables professional trainers to manage virtually all aspects of employee, partner, and customer training. With the Adobe eLearning solution, trainers can schedule courses, enroll learners, grant viewing permissions, automate enrollment notices and reminders, and track learner statistics. Trainers can also develop curriculums that drive results by combining live classes, multiple self-paced training courses, and other training content. In addition, they can easily define course prerequisites, specify optional and required modules, and establish progressive learning paths for self-paced training, live instructor-led training, and external events such as manager assessments. And, they can customize the look and feel of self-paced courses and virtual classrooms using company logos and colors, in accordance with the company brand guidelines.

Leverage your existing infrastructure

The Adobe eLearning solution for rapid training integrates smoothly with common corporate user management and learning management systems. It supports Active Directory and LDAP for user authentication, and all rapid training content produced with this solution is SCORM 1.2, SCORM 2004, and AICC compliant, making it easy for trainers and administrators to deliver and track courses through their existing corporate learning management systems.

Produce measurable results with an affordable end-to-end training solution

The Adobe eLearning solution for rapid training is a cost-effective end-to-end training solution that can help you solve your most challenging training issues. It enables training professionals with PowerPoint skills to develop progressive training curriculums and create and deploy standards-compliant, rich training modules that will engage minds and get your employees, partners, and customers on message and up to speed in no time.
