Major Features

This table lists the status of support for SVG features that are unrelated to SVG elements, attributes, or properties.

Feature	Notes
raster images	GIF, JPEG, and PNG.
progressive rendering	
compression	gzip and zlib compression
embedded Web fonts	CEF fonts
printing	Printing is done in raster mode only. PostScript printing is not yet supported.
"data" pseudo-protocol (RFC 2397)	

Elements and Attributes

This table lists the elements and attributes supported by the viewers. All attributes are supported unless noted in the table below, with the following global exceptions. General attributes which are not yet supported include xlink:type, xlink:role, xlink:title, xlink:show, xlink:actuate, xml:lang, system-required, and externalResourcesRequired.

The DOM

This section covers the XML Core DOM Levels 1 and 2 (including the extended XML interfaces) exposed by the Adobe SVG Plug-In and Control, as well as the SVG DOM Extensions. This API allows JavaScript, Visual Basic, and C/C++ COM clients to add, query, modify, and/or replace nodes within the underlying XML tree created by the SVG parser. For a full understanding of the DOM, please consult the W3C's [Document Object Model](#). For the event handlers onkeydown, onkeyup, and onkeypress to work, you must first have the embedded frame obtain key focus, by clicking in the frame. Then you must hover the mouse over an element that has an ID (or an element who has an ancestor with an ID). Then hit a key.

DOM Support (DOM2 in green, as of 3/7/00 draft)	(Views, Stylesheets, CSS, Traversal, and Range not covered yet)	* Note that Properties are only supported in IE. In NN, they quietly fail. Also, support of a constant means the constant value is accessible as a property.
