○ ColdFusion Standard is supported in 32-bit mode for this platform.

Notes on database driver support:

– The use of additional third-party JDBC drivers is supported. However, Adobe is not responsible for issues arising specifically from the use of those drivers, or for supporting the third-party drivers themselves. For more information on ColdFusion support for JDBC drivers not shipped with the product, read the TechNote at www.adobe.com/cfusion/knowledgebase/index.cfm?id=tn_18593.

– MS Access 2007 will be supported only via the ODBC Socket Driver.

– ODBC Socket Datasources do not work on Windows Vista.

DISCLAIMER: This document is intended to provide information about the possible platform combinations available at the time of its writing. Some platform combinations may not be supported by vendors of the various components of the platform (operating system vendor, web-server vendor, application-server vendor, JDK provider, and so on). Please refer to each vendor's system requirements and support policies to ensure the combination you plan to run is supported.
