

Adobe® Document Server

Create documents that drive business

For large organizations such as financial services institutions, governments, and manufacturers, the ability to produce personalized documents is becoming increasingly essential to business success.

USE ADOBE DOCUMENT SERVER TO:

- Leverage the power of PDF to create personalized constituent communications
- Assemble multiple Adobe PDF files into a single document
- Connect critical data to and from PDF files and core applications
- Automate forms-based transactions and generate customized Adobe PDF documents from the server

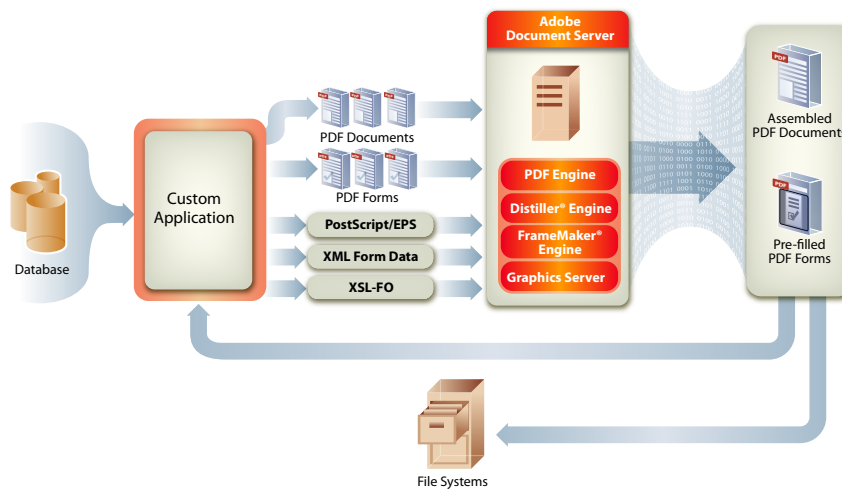

Documents formerly produced for mass consumption such as financial proposals and reports, product manuals, and marketing brochures are now being customized for highly specific audiences, even individuals. However, managing the creation of targeted documents can be complex, and innovative enterprises are looking for new technologies to help them with the task.

Reduce costs and improve customer service

Adobe Document Server software enables high-throughput production of customized documents to reduce costs, errors, and processing times. By automating the production of documents, businesses also streamline the introduction and fulfillment of new products and services, and by delivering documents with text and graphics personalized for the user, they create satisfied customers and loyal partners.

Generate Adobe PDF documents on your server

Adobe Document Server supports the dynamic creation of Adobe Portable Document Format (PDF) documents from a variety of sources, including Adobe PostScript® language files, Adobe PDF forms, and XML files. By flowing XML data retrieved from an enterprise application or database into templates, Adobe Document Server can generate customized Adobe PDF documents and automate forms-based transactions. Adobe Document Server also supports eXtensible Stylesheet Language Formatting Objects (XSL-FO). This emerging Web standard combines standard XML data with layout information for multipage documents containing text, graphics, and images. Adobe Document Server offers a scalable server architecture that can run across multiple CPUs, meeting the high-performance needs of your business.

SYSTEM REQUIREMENTS

Microsoft® Windows® 2000 Server or Windows 2003 Server

- Intel® Pentium® III 500MHz or faster processor
- 350MB of disk space for installation

Sun™ Solaris™ 8 or 9

- Sun UltraSPARC® III 440MHz processor (Enterprise 280R with two 750MHz UltraSPARC III or faster recommended)
- 512MB of RAM per CPU (1GB per CPU recommended)
- 350MB of disk space for installation

LEVERAGE THE BENEFITS OF ADOBE PDF

Adobe PDF can be read across all major computing platforms, making electronic documents universally accessible to anyone using the freely available Adobe Reader® software. With more than 500 million copies of Adobe Reader distributed worldwide, Adobe PDF has become the de facto standard for delivering documents electronically.

Additionally, with support for document security, offline accessibility, and reliable printing, Adobe PDF satisfies the requirements of document-intensive organizations.

Assemble, manipulate, and personalize documents

Adobe Document Server provides powerful tools that allow enterprises to assemble and manipulate long, sophisticated Adobe PDF documents. Individual pages from separate Adobe PDF files can be added and deleted or merged to create compound documents. Bookmarks and links can be extracted, and comments can be added, deleted, or extracted. Tables of contents can be instantly created with links for navigation. Adobe Document Server also renumbers pages and updates all embedded links, saving time and resources.

Adobe Document Server provides enterprises with the tools employees need to collaborate with customers and partners. Forms can be included within longer documents, allowing readers to provide opt-in information, register for special offers, and interact with document publishers. Personalized headers and footers can also be placed across long, compound documents. Dynamic, XML-based information can be imported directly into Adobe PDF files, allowing communications to be tailored directly to specific individuals. And with support for Scalable Vector Graphics (SVG), dynamic charts and graphs can be incorporated into customized documents.

Key features and benefits

Create Adobe PDF documents

- Convert XSL-FO, EPS, and SVG into Adobe PDF
- Distill PostScript language files

- Flow XFDF or FDF data into Adobe PDF forms

Manipulate Adobe PDF documents

- Add, delete, rotate, and scale pages
- Extract bookmarks and links
- Add, delete, and extract comments
- Add overlay and underlay content, including watermarks and stamps

Secure PDF

- Employ password-based encryption
- Set PDF security properties (view, print, edit)

Assemble multiple Adobe PDF documents into a single document

- Create hyperlinked tables of contents
- Renumber pages
- Generate new headers and footers
- Automatically resolve interdocument links so that they become intradocument links in the newly assembled document

Extract critical information from Adobe PDF documents

- Read XFDF data from form fields
- Extract embedded XML data and XMP metadata

Utilize Adobe Graphics Server functionality

- Convert and manipulate graphics and images, including PSD, EPS, SVG, TIFF, JPEG, GIF, PNG, and WBMP files
- Convert images to Adobe PDF and Adobe PDF to images

Support enterprise IT environments

- Integrate easily into network environments via Web services (SOAP, Java™, COM, and Perl interfaces)
- Enjoy scalable, high-performance server architecture
