Output Manager

Manage print jobs for increased productivity

Companies today operate in highly competitive, global markets. To succeed, they need to simultaneously reduce costs and increase productivity. Adobe offers a complete solution for document generation that helps organizations cut costs and save time. And, with Adobe Output Manager, companies can extend their productivity gains through more efficient print management.

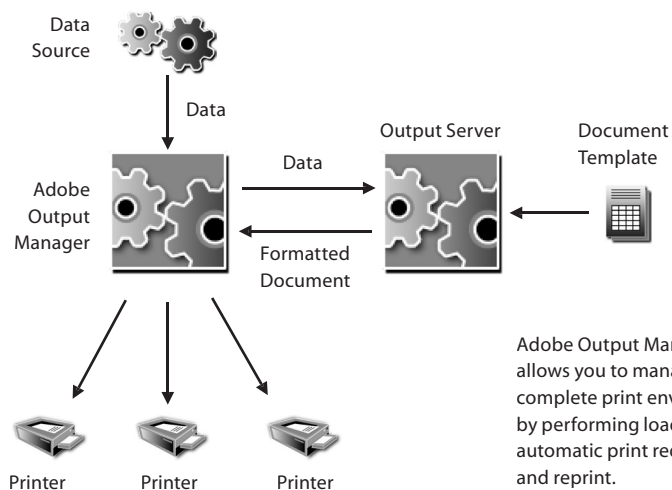

Create Professional Customer-Facing Documents

Adobe solutions let you generate high-fidelity documents from your existing legacy, ERP, CRM, or line-of-business applications, maintaining your corporate image and strengthening relationships with customers, partners, and suppliers. These solutions allow you to generate business documents quickly and easily, regardless of where the data comes from. Adobe specializes in tools that let you create personalized, dynamic documents. Adobe Output Manager ensures delivery of these professional, customer-facing documents to a printer.

Guarantee Document Delivery

For many companies, printing and print management represent a significant operating expense. This is where Adobe Output Manager steps in, providing a print management environment that ensures document delivery, offers reprint of failed print jobs, and handles printer load balancing. With Adobe Output Manager, you can take control of your print environment by diagnosing

and resolving print problems quickly. As a result, you can minimize delays in critical production processes and thus save time and money.

Adobe Output Manager allows you to manage your complete print environment by performing load balancing, automatic print redirection, and reprint.

Key Benefits

Adobe Output Manager provides the ability to manage print output, and also offers users the following benefits:

Greatly reduced help-desk calls

A significant percentage of an organization's help-desk calls involve print-related difficulties. Adobe Output Manager can eliminate many of these calls by alerting administrators to potential problems before end users are affected.

Better managed ERP output

ERP applications, such as SAP® and Oracle® E-Business Suite, can generate thousands of print jobs daily. Occasionally these ERP applications notify the user that a print job was successfully delivered, but the job may never have actually reached its final destination. Adobe Output Manager ensures that ERP applications print critical documents—such as invoices, pick lists, and purchase orders—and deliver them to the right place at the right time.

Overall improvement in business efficiency across the enterprise

Organizations that proactively manage print output can significantly improve overall business efficiency by minimizing process interruptions caused by failed print jobs. Adobe Output Manager provides these critical capabilities:

- **Load balancing:** Promotes more efficient use of printer resources by dividing print jobs according to printer capability and runtime usage.
- **Print redirection:** Moves print jobs from stalled or busy printers to those that are available, resolving backlogs in the print process.
- **Reprint:** Can eliminate the need to rerun or resubmit jobs by letting you shift failed print to jobs to another printer.

System Requirements

Server

Microsoft® Windows® 2000 or Windows NT® 4.0, Sun™ Solaris™ 8 or 9, HP-UX 11 or 11i, IBM® AIX® 4.3.3 or 5L, Red Hat® Linux® 7.1 or 7.3

Client

Windows 98, Windows 2000, Windows NT 4.0, or Windows XP

Web browser

(Microsoft Internet Explorer or Netscape)
X Window System™/Motif®
