

Adobe® Output Pak for mySAP.com®

Effective customer-facing documents from mySAP.com

Many companies today invest in mySAP.com solutions to streamline business operations and improve customer relationships. However, customers don't see the behind-the-scenes data management. They see the documents produced by the system—the purchase orders, invoices, shipping documents, and checks.

USE ADOBE OUTPUT PAK FOR MYSAP.COM TO:

- Improve customer communications with professional, formatted, dynamic documents from your SAP system
- Customize documents easily with the easy-to-use template design tool
- Deliver sophisticated documents via Adobe Portable Document Format (PDF), print, fax, e-mail, or the Web

Adobe document generation solutions work with your SAP systems to create sophisticated, customer-focused documents. Adobe Output Pak for mySAP.com transforms report-like information from your SAP system into professionally formatted, dynamic business documents that enhance your

corporate image, all without the need for expensive custom programming or preprinted forms inventories. This solution improves your customer communications by enabling you to include personalized messages within documents.

ADOBE DOCUMENT SERVICES FOR DOCUMENT GENERATION

Adobe Document Services are the underlying technologies that create and integrate Intelligent Documents with enterprise applications and business processes. Adobe Document Services unlock the power and extend the reach of native eXtensible Markup Language (XML) and Portable Document Format (PDF) to integrate documents into the IT environment—without sacrificing document integrity or open standards.

The image shows two side-by-side document outputs. On the left is a raw SAP report, which is a text-based table with columns for item, quantity, price, and amount. It contains several rows of data and some header information. On the right is a formatted Adobe invoice. It has a clean, professional layout with a header section containing 'Invoice' and 'Date' fields. Below that is a table with columns for 'Item Description', 'Quantity', 'Unit Price', and 'Amount'. The invoice also includes a 'Ship To' address and a 'Purchase Order Number' field. The overall appearance is much more organized and visually appealing than the raw SAP report.

Before (left) Adobe Output Pak for mySAP.com: Report-like document produced by SAP system. **After (right) Adobe Output Pak for mySAP.com:** Adobe document generation solutions combine data and formatting to produce professional-looking documents for Adobe PDF, print, e-mail, fax, or Web delivery.

Key Features

Dynamic document design

Adobe Output Designer, a WYSIWYG document template design tool used with Adobe Output Pak for mySAP.com, lets you make document changes quickly and easily. Dynamic capabilities also make it easy to tailor any document for a specific audience or customer. For instance, the same document template is used to generate an invoice with 3 or 150 detail lines—the data itself controls the appearance of the final document.

Worldwide document delivery

Multilanguage document generation is a clear requirement for companies operating in today's global economy. To support businesses operating in multiple countries, Adobe Output Pak for mySAP.com can generate documents in a variety of languages, including English, French, German, Swedish, Spanish, Italian, Finnish, Norwegian, Danish, Portuguese, Czech, Polish, Hungarian, Russian, Simplified Chinese, Traditional Chinese, Korean, and Japanese.

Flexible output in multiple formats

Adobe Output Pak for mySAP.com dynamically delivers documents to customers and business partners in a variety of formats. It integrates directly with SAP to capture information and merge it with a template that defines the layout of a document. The result is an extremely flexible and cost-effective way to create and maintain sophisticated documents for delivery via Adobe Portable Document Format (PDF), print, fax, e-mail, or the Web.

Additional features

- Includes a set of ready-to-use document templates and layout sets for rapid implementation
- Tightly integrates with SAP's proven Raw Data Interface (RDI), providing printing, archiving, e-mail, and fax selection directly from SAP
- Offers SAP XML Smart Forms (XSF) data interface for printing from SAP Smart Forms
- Provides in-the-box integration with popular SAP document archiving solutions, EASY Archive and IXOS Archive
- Produces high-fidelity, high-volume output in multiple formats to multiple delivery devices, including PDF, print, e-mail, fax, the Web, and label printers
- Generates documents that can contain fixed and variable text in any font, including bar codes, logos, boxes, lines, colors, and calculations, and can contain sophisticated dynamic layouts and pagination
- Includes Form Builder to create new document templates directly from existing SAP layout sets
- Reduces network traffic significantly by sending a simple data stream across the network for local formatting and printing
- Produces multiple documents from one data stream; for example, prints shipping documents and labels in one transaction
- Integrates with popular output management systems from OpenText, Macro 4, HP, and Siemens
