Overview

Release Date
Adobe Connect 9 will be rolled out in phases

- **On-Premise**: Adobe Connect 9 installer for customer premise deployments (All supported Locales): August 17, 2012.
- **Hosted**: Adobe Connect 9 service hosted by Adobe: Starting August 17, 2012, please check the migration schedule for your account [here](#).
- **Managed Services**: Adobe managed customer specific cloud deployment of Adobe Connect: Update scheduled based on customer requirement. Please reach out to your Adobe Connect managed services representative to schedule your update.

Description
Adobe Connect is a market-leading web conferencing solution that enables corporations and government agencies worldwide to improve collaboration, webinars, and eLearning through exceptionally rich interactions. This major release delivers critical new capabilities to address challenges faced by many organizations in conducting webinars, mobile learning, and mobile-to-mobile collaboration. This release also resolves a number of issues and bugs.

System Requirements
For latest system requirements please visit [http://www.adobe.com/go/connect_sysreqs_en](http://www.adobe.com/go/connect_sysreqs_en)
Important Update Information

Please review the following important information regarding the update.

**New Adobe Connect Add-in**

**Minimum Adobe Flash Player version 10.3 for attending meeting**

**Migration for Adobe Connect Events module**

**Enforcement of Named Host License**

**Deprecated Adobe Connect Desktop**

**eLearning Suite 6 Integration**

**Deprecated Adobe Connect Presence Server**

**Deprecated Linux Ubuntu 10.04 Add-in**

**Other key changes to system requirements**

**Large Seminars and Advance Scheduling**

**Adobe Connect Server Upgrade Path for In Premise Deployments**

**New Adobe Connect Add-in**

This update requires a new Adobe Connect Add-in (henceforth referred to as simply “Add-in”) for functionality specific to meeting hosts and presenters on Windows and Mac. You will be asked to install the new Add-in when:

- You try to start/join a 9.0 meeting for the first time and
  - Have an older version of the Connect 9 Add-in installed, OR
  - Have the Connect 8 Add-in installed but not the Connect 9 Add-in

  OR

- You invoke screen sharing, application sharing, or share PowerPoint (PPTX format) files and
  - Do not have the Connect 9 Add-in installed OR
  - Do not have the latest version of the Connect 9 Add-in installed

The new Add-in is based on a later version of Flash Player (than the Adobe Connect 8 Add-in) and provides better performance. The new Add-in will also enable our developer community to create custom pods targeting Flash Player 10.
If you are in a locked-down IT environment, we recommend that you ensure that all of your end users have the new Adobe Connect Add-in and Adobe Flash Player (version 10.3 or later) installed. Please download the Adobe Connect 9 Add-ins from this page, or directly from the links here:

- Add-in for Windows
- Add-in for Mac

Since the new Add-in co-exists with the Adobe Connect 8 Add-in, it can be downloaded and installed in advance of the Adobe Connect 9 upgrade. More information about the Add-in can be found here.

**Minimum Adobe Flash Player version 10.3 for attending meeting**

Adobe Connect 9 leverages advancements in Adobe Flash Player technology for improved audio, video and interactivity. The minimum version required to attend meetings is 10.3. It is recommended to always use the latest version of flash player which can be downloaded from here.

**Migration for Adobe Connect Events module**

The enhancements include several key updates to the Adobe Connect Events Module and event registration capabilities. The new Events module features will be available only for new events which are created after the upgrade and all existing events will be preserved. We encourage all the users of the Adobe Connect Events Module to review this Adobe Connect 9 Event Migration Guide to get familiar with the new registration capabilities in advance of your upgrade.

**Enforcement of Named Host License**

With this upgrade, we will be more strictly enforcing Named Host licensing in accordance with the Terms of Service. This update only applies to those using the Named Host licensing model, and will not affect users who are using the product in accordance of the licensing terms (i.e. not sharing licenses, etc.) More information on this can be found in this FAQ.

**Deprecated Adobe Connect Desktop**

Adobe Connect Desktop, the AIR-based desktop application which helped meetings hosts manage recordings and create offline versions, will not be supported for Adobe Connect 9. We will continue to support it for Adobe Connect 8. The Adobe Connect desktop tool can be found here.

**Elearning Suite 6 Integration**

Along with the launch of Adobe Connect 9 and Adobe Connect Mobile 2.0, the solution for eLearning users is enhanced with updates to our authoring tools, and the release of Adobe Captivate 6, Adobe Presenter 8, and the first release of Adobe Presenter Mobile for iPad. Now you can author content once for use across desktop and mobile devices.
Deprecated Adobe Connect Presence Server
Adobe Connect Presence Server provided an XMPP gateway to interconnect Adobe Connect with Microsoft LCS. It provided meeting invitees’ LCS presence information inside the Adobe Connect meeting. With Microsoft Lync, we are now providing a client side integration instead where users can invite and launch Adobe Connect meeting directly from their Microsoft Lync or Office Communicator client. Adobe Connect MOC Add-in can be downloaded from here.

Deprecated Linux Ubuntu 10.04 Add-in
This upgrade does not include Adobe Connect Add-in support for Linux Ubuntu 10.04 users. Users joining a meeting from Ubuntu 10.04 will be able to attend a meeting from their browsers but Presenters and Hosts of the meeting will not be able to initiate a screen share or create an offline recording. For details on the functionality of Adobe Connect Add-in please refer to this page.

Other key changes to system requirements
Adobe Connect 9 release deprecates the following support. For latest system requirements please visit http://www.adobe.com/go/connect_sysreqs_en
- Internet Explorer 6 from client system requirements
- Adobe Connect Add-in for Mac OS X 10.5 (Leopard)
- Oracle Solaris from client system requirements

Large Seminars and Advance Scheduling
With this upgrade Adobe Connect Seminar Rooms allow you to conduct large meetings and webinars with up to 1500 participants on the Adobe hosted service. This update also introduces a scheduling mechanism which makes it easy to detect and prevent conflicts between multiple seminar meetings happening on the same license. Advance scheduling is required for seminar meetings with 600 or more participants but is optional for seminar meetings with less than 600 participants.

Adobe Connect Server Upgrade Path for In Premise Deployments

From Adobe Connect 8.x
Upgrade to Adobe Connect 9.0

From Adobe Connect 7.5.x
Upgrade to Adobe Connect 7.5.2.3 and then to Adobe Connect 9.0

From Adobe Connect C7.0.x
Upgrade to Adobe Connect 7.5.2.3 and then to Adobe Connect 9.0
What's New in Adobe Connect 9

The new version of Adobe Connect offers improvements in the following areas:

- A revamped Webinar solution integrated with Adobe Digital Marketing Suite
- Added eLearning capabilities including SCORM import
- Improved meeting experience on desktop and mobile
- Increased Seminar Room capacity of up to 1500 participants on the Adobe hosted service

New events registration module
Rapidly create enticing on-boarding experiences for your webinars and training

Rich HTML based event page templates

With an easy-to-use drag and drop interface powered by Adobe CQ5™ technology, you can create customized event page templates including a landing page, speaker information page, registration page and login page. While two event page templates are included, Event Managers and Event Administrators can create any number of custom branded templates by using a number of rich components such as images, Flash, tables, charts, carousels, and more. Event Administrators can further control branding by creating shared templates that cannot be edited.
Template based email triggers
Customize email triggers with HTML templates. Create email templates with the easy to use drag and drop interface powered by Adobe CQ5 (TM) technology. Just like the event templates, you can create email templates that are either shared or private—to allow for better branding control. Apart from the standard email triggers like invitation, reminder, thank you or missed you, you can also create custom email triggers that go out to specified registration groups at a predefined time. Custom triggers include selecting a time relative to an event, BCC recipients, predefined reply-to addresses, and more.

Events catalog
To improve event discovery, Adobe Connect 9 automatically generates a master event catalog that lists all events published in the catalog. You can now embed the Events catalog in any website using automatically generated embed code available from the Settings menu. It’s also possible to create multiple catalogs for each folder in the events section. The catalog provides a list view and a date view for reviewing event listings. You can also filter events based on tags and highlight featured events in a carousel. Event Administrators have full control over the catalog layout and branding.
Registration without password
To allow for simplified event registration, you can now create Events that don’t require a password. Participants log into these Events via their email addresses.

Simplified viewing of on demand events
Events setup for on-demand viewing with recordings, presentations, eLearning, PDF documents or other supported content now have a simplified participant experience. When an event is setup to allow direct entry, participants can immediately view the content within that event after submitting their registration form. They do not need to wait for a confirmation email.

Event Administrator role
The new role of Event Administrator provides better control for enforcing branding guidelines and event configurations. Event Administrators can create shared Reference Templates, limit tags in the Event Catalog, create Reply-to options for email triggers, and assign Event Manager roles to registered users.
Detailed event reporting
Optimize your webinars and training by knowing what works

Measure event effectiveness

The detailed reporting of user engagement and attendance helps you to understand which parts of the event were effective and which parts require improvement. Apart from the new engagement report, detailed reports are available on user participation and interactions such as Q and As, polls, file downloads, chat, and status updates.

Measure promotion effectiveness

Campaign reports provide a detailed view into the performance of campaigns run to promote events. You can not only measure performance in generated page views but also in generating event logins and qualified leads. You can set lead qualification rules on both the demographic information submitted by users during registration and behavioral information like attendance duration.

Detailed participant profiles and qualification

Participant profiles combine demographic information from registration questions such as name, email etc. with behavioral information from event participation such as poll responses, engagement level and questions asked. The details are useful for more effective follow-ups and lead qualification. You can download participant profiles as either a CSV file or through the web services APIs for further integration with lead management systems.

Integration with Adobe SiteCatalyst™

Event reports are powered by Adobe SiteCatalyst technology. Adobe SiteCatalyst customers can integrate their events data with data from other channels for powerful closed loop marketing. Customers can also use the rich toolset provided by Adobe SiteCatalyst to slice and dice their events data for further insights.
Engagement dashboard
Increase webinar and training effectiveness through real time feedback on audience engagement

Measure Engagement
The new Engagement dashboard provides a snapshot of participants’ overall engagement during the course of the seminar. Through a proprietary algorithm, Adobe Connect monitors various user interactions within the meeting room, voice conferences, polls, Q&As, status updates etc. to arrive at a participant engagement score. The aggregated engagement score for all the participants in the meeting is displayed in the engagement dashboard. Individual engagement level for each participant is also displayed in the attendee pod. An engagement score variation over time is reported post event to analyze portions of the event that can be improved.

Monitor Interactions
The engagement dashboard displays how many participants have responded to the various polls and outstanding questions in the Q and A pod. Presenters can use this information to tailor the flow of their sessions. This dashboard is available only in the Presenter Only Area of live Events as well as all Virtual Classrooms and Seminar Rooms.

Improved Seminar room capacity
Conduct engaging webinars with up to 1500 participants

Increased Capacity
Connect Seminar Rooms allow you to conduct large meetings and webinars. With an increased capacity of up to 1500 participants for Seminar Rooms on the Adobe hosted service, you can conduct a wide range of meetings from team meetings to all hands on Adobe Connect. All the rich interaction capabilities like single click layouts, presenter only areas, polls, Q and A etc. are available to keep all meetings flowing smoothly.

Seminar Room Scheduling
New in Adobe Connect 9 is a Seminar Room calendar which allows you to easily find available time slots and prevent conflicts with other scheduled seminars. Calendar view shows availability across all of your seminar licenses based on the scheduled timings for your seminars.
Improved meeting experience
Collaborate more effectively with these enhancements

Share Pod

Users now have the zoom options easily accessible to them for a better viewing experience for screen sharing. The full screen option for share pod is also available in the meeting recordings. There is a new option for meeting Presenters to move all Participants to full-screen mode when starting a screen-share session. Meeting hosts can hide the title bar of the share pod to increase the viewing area. This is useful for branding the meeting room with custom images and logos.

Audio

Hosts can easily manage noisy participants with the option to mute attendees connected via integrated teleconference.

Video

A highlighted frame displays around the speakers video feed so participants can easily identify who is talking. This option is configurable by the meeting hosts.

Q&A Pod

Meeting Presenters now have the ability to send messages to selected participants from the Q and A pod. This is particularly useful in large formal meetings. Hosts can hide chat communications from participants by hiding the chat pod, while still having the ability to communicate through the Q&A pod.

Poll Pod

A new short answer poll option increases flexibility in administering polls. Meeting hosts can now also see participants who have not yet voted in the View Votes tab in the poll pod.
**Improved editing of meeting recordings**
Convert meeting recordings to shareable assets

**Custom Index**
A logical index can significantly improve the recording and viewing experience. It’s now possible to create a custom index for recordings through Chapters and Bookmarks. Bookmarks advance the user to specific spots in a recording, while Chapter markers are higher level logical groupings of several bookmarks. Hosts can add, edit, and delete new bookmarks or chapter markers in a recording. This flexibility helps hosts ensure a better viewing experience.

**Hide Pods from Recording**
Organizers can hide the chat pod, attendee pod and Q&A pod from a recording. When the Share pod is the only remaining pod in the recording, it expands to full screen to improve the viewing experience.

**Make participants anonymous**
Organizers can hide the names of all attendees from meeting pods such as the chat pod, the Q and A pod, and the attendee pod before sharing a recording. This is useful for protecting the identity of participants.

**SCORM Import**
Deliver a wide range of eLearning content from Adobe Connect

Important to all eLearning programs is the ability to track learner activities. Instructors need to follow their students’ progress and run reports on test scores. eLearning authors can now directly import SCORM content into an Adobe Connect Server for use in training courses delivered from our Rapid Training Management System. This is great news if you have already invested significantly in the creation of learning content, as you will be able to quickly and easily use your existing SCORM content within Adobe Connect Training Courses and curricula. This is a great way to reduce the cost of integration, by leveraging your existing content development efforts.
Integration with Adobe eLearning Suite 6
Use latest Adobe eLearning authoring tools with Adobe Connect 9

Adobe Connect has always been a great way to provide users and learners with anywhere, anytime access to rich and delightful content created using Adobe’s eLearning Suite of tools. With continued advances in the eLearning Suite, the solution is now extended to support mobile platforms. Publish your Adobe eLS mobile-format content to the Adobe Connect Server, and users may now access and play it from a wide variety of the most popular handheld devices in the market today.

Adobe Connect Mobile 2.0
Not just attend but also host meetings from anywhere, anytime

Adobe Connect Mobile is already the most highly-rated of the widely distributed live collaboration clients for mobile devices. That hasn't stopped us from improving it even further. Adobe Connect Mobile 2.0 provides a significantly richer experience for those using tablets to host and attend meetings. Mobile hosts now have a set of meeting controls unmatched by any in the marketplace including sharing documents and presentations from an Adobe Connect Server. Hosts may now change layouts within meetings, use the whiteboard and draw on slides to enhance a critical point. Control over participants’ recordings and audio within the meeting have also been extended for tablet-based mobile hosts.
Mobile On Demand Learning with Adobe Presenter and Adobe Captivate

Author rich and engaging content once, and make it available to both your mobile and your desktop users, with a single publish to Adobe Connect.

- Publish your Adobe Captivate 6 project as HTML5 output, and verify the content is HTML5-capable with the included HTML5 Tracker. Make your content available from the Adobe Connect Content Library as a general learning resource, or as an Adobe Connect Training Course for formal learner assignment, communication, tracking, and reporting within the Connect Training system. HTML5 content can be viewed in any browser that is HTML5-capable, including those found on most mobile devices, as well as the most popular desktop browsers.

- Publish your Adobe Presenter 8 presentations with audio, embedded video, and basic quizzing, and make them available by publishing them to the Adobe Connect Content Library, or as an Adobe Connect Training Course. These presentations will run in any flash-capable browser on a desktop machine, and on the iPad using the new, free, Adobe Presenter Mobile app. As with Captivate above, Presenter Courses that are a part of an Adobe Connect Training program, and can be assigned to learners, associated with learner reminders and notifications, and will be tracked for credit within Training programs, and in reports on Adobe Connect Central.

Real Time Mobile Learning in Adobe Connect Mobile

The vast majority of mobile learning that occurs today happens on demand. While this is a great way to provide access to knowledge whenever the learner can find the time, scheduled virtual classrooms are now a great option to extend the experience with Adobe Connect Mobile 2.0.

The use of Adobe Captivate and Adobe Presenter learning objects is not supported in Adobe Connect Mobile. For more information and best practices on using the eLearning Suite integration to deliver mobile learning, please visit our Learning Center (http://www.connectusers.com/learning_center/).
## Issues Resolved

<table>
<thead>
<tr>
<th>Issue Tracking Number</th>
<th>Issue Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2775194</td>
<td>Fixed issue where Adobe Presenter presentations shared in the Share Pod were not synchronized for late arriving participants in a meeting session.</td>
</tr>
<tr>
<td>3073303</td>
<td>Fixed issue where learner report for the learners group would differ from the learners report for the individual user and would show incorrect information.</td>
</tr>
<tr>
<td>3084548</td>
<td>Fixed issue when multiple large courses shared in a Virtual Classroom will sometimes fail to load the course.</td>
</tr>
<tr>
<td>3159979</td>
<td>Fixed issue where “by users” reports for a curriculum will display inconsistent results for some users.</td>
</tr>
<tr>
<td>3165951</td>
<td>Fixed issue where Page UP/Page Down keyboard shortcuts will not work for advancing slides when an Adobe Presenter presentation is shared in the Share Pod.</td>
</tr>
<tr>
<td>3170213</td>
<td>Fixed issue where ending a secure screen sharing session in the meeting will sometimes cause the Internet Explorer 8 to crash.</td>
