This sample shows the presentment of a travel document.

The document consists of:
- a cover page (this one)
- itinerary information, reference and date and a repeating group of flight info
- a customs page
- a medical information page
- accommodation information, guest info and a repeating group of hotel info
- a boarding pass for each flight.

This sample demonstrates the creation of a dynamic document with portions printed in Landscape orientation and portions printed in Portrait orientation.

This sample also demonstrates the use of binding strips along certain page edges which work nicely with a Hewlett Packard® BindJet printer. The density of toner in the strip determines the degree of bind.

Information presented in Red provides an explanation of how this sample works.

Data field values that are bolded are global values and are likely utilized on multiple pages.

This cover page is produced using a full page subform [COVERPAGE] on a portrait foundation page [JFMAINPORT]. The triggering event is the field event !FldNotAvail for REFERENCE_NUMBER.

The data is structured in groups - REFERENCE, ISSUE, FLIGHT, CUSTOMS, MEDICAL, ACCOMODATIONS, HOTEL, TICKET.

The Custom Property [JFPREAMBLE] contains valuable information about this solution.

This subform [ITINERARY] is a heading for the page and contains a global field (bar code). It is activated as part of the !BOF event for group FLIGHT. This header subform will appear on all flight pages.

This subform [ISSUE] has the global attribute set for all fields. It will be triggered by a !FldNotAvail event associated with ISSUED_BY and as part of bottom of page (!BOF) for the flight subform.

This subform [FLIGHT] is invoked by the presence of the field LEG_DESC in the data stream as a !FldNotAvail or !FldUsed event.

This subform [FLIGHT] is invoked by the presence of the field LEG_DESC in the data stream as a !FldNotAvail or !FldUsed event.
CUSTOMS DECLARATION

Each arriving traveler or responsible family member must complete the declaration. Only ONE written declaration per family is required.

1. Family Name
   Mustard

2. First (Given) Name
   Terry

3. Middle Initial
   A

4. Country of Citizenship
   United States

5. Country of Residence
   United States

6. Date of Birth yy/mm/dd
   03/15/1985

7. Number of Family Members Traveling
   1

8. Airline Flight Number or Vessel Name or Vehicle
   South

9. U.S. Address (Street No., Street, and Unit No.)
   560 Rochester Street

10. City
    Chicago

11. State
    IL

12. Zip Code
    33567-1890

13. Countries visited on this trip prior to arrival in U.S.
   a. Australia
   b. New Zealand
   c. 
   d. 

14. The purpose of my (our) trip was
    ☐ Business  ☐ Pleasure

Declaration of goods

15. I am (We are) bringing fruits, plants, meats, food, soil, birds, snails, other live animals, wildlife products, farm products; or, have been on a farm or ranch outside the U.S.: ☐ Yes  ☐ No

16. I am (We are) carrying currency or monetary instruments over $10,000 U.S. or foreign equivalent: ☐ Yes  ☐ No

17. I (We) have commercial merchandise, U.S. or foreign: ☐ Yes  ☐ No

18. The total value of all goods, including commercial merchandise, I (we) have purchased or acquired abroad and am (are) bringing into the U.S. is:

Signature ___________________________ Date ________________

Confirmation DS763389

This full page subform [CUSTOMS] will be placed on a portrait foundation page [JFMAINPORT]. The triggering event is a !FldNotAvail event for field Birth_Date. The event triggers subform CUSTOMS that has a reserve attribute that in turn causes the !BOF event. The foundation page is invoked and a binding strip subform is placed along the left edge. This subform is then placed on the page.

Thank you for choosing Accelio

This header subform [BOARDING] will fit one to a page. The subform was defined as always start a new page. It represents a boarding pass. The subform will be placed on the foundation page JFMAINLAND - in a landscape orientation. The triggering mechanisms are the field events !FldNotAvail and !FldUsed associated with the first data element in the data group (Flight_date). The system generated field events cause a group event to fire. The group event has a reserve clause on it that reserves the whole page. This forces a !BOF event - thus activating a new page.
