FOR IMMEDIATE RELEASE

Adobe Sensei Transforms Brand Emails Through Design and Intelligence

Survey Shows Consumers' Email Expectations are Putting Pressure on Brands

Hong Kong — 11 September 2017 — Email continues to thrive, even as technology transforms the way consumers interact. Adobe's third annual [email survey](#), focused on U.S. white collar workers' habits related to personal and work email, reveals consumers' preference to be contacted by brands via email is on the rise. However, marketers are challenged with people spending less time checking email and deleting 40 percent of emails sent to their personal inboxes. Consumers increasingly demand personalized emails, with 34 percent reporting frustration when brands recommend items that do not match their interests.

To address consumers' email behavior and expectations, Adobe (Nasdaq: ADBE) today unveiled new email innovations that help brands lead with experience and avoid adding to the noise of the inbox. [Adobe Campaign](#) in [Adobe Marketing Cloud](#), part of [Adobe Experience Cloud](#), enables marketers to send hyper-personalized, engaging emails based on customer knowledge and interactions. Artificial intelligence and machine learning, through [Adobe Sensei](#), power Adobe Campaign's predictive capabilities. Adobe was recently recognized for its email and campaign management capabilities in Gartner's July 2017 [Critical Capabilities for Multichannel Campaign Management](#).

"As brands continue to embrace email marketing as a pivotal component to build delightful, holistic experiences, many struggle with meeting customers' heightened demands," said Stephan Dietrich, vice president, Adobe Campaign. "Our new email innovations further cement our leadership in helping enterprises provide well-designed emails that enhance customer relationships, brand awareness and ultimately sales."

Adobe Campaign's new capabilities and upcoming innovations from its labs enable email marketers to:

- **Predict the best images for emails:** Adobe is previewing an email project in development in its labs for potential future integration in Adobe Campaign, which leverages Adobe Sensei to select the most relevant images to include in an email to drive conversions. As an image is inserted into an email, a score is calculated based on industry data of how customers have reacted to similar images based on three million assets. The algorithm automatically recommends how to adjust the image to achieve a higher engagement rate. For example, the feature may predict that an outdoor gear retailer's spring promotion email will perform better serving up an orange six-person tent versus a blue two-person tent. The feature builds on the [predictive subject line](#) capability available in Adobe Campaign Standard today.

- **Predict customer churn:** Adobe is also previewing a forward-looking email project with Adobe Sensei to analyze changes in customers' usage and engagement of Adobe Campaign, such as a drastic decrease in volume of emails sent, changes in the frequency of features used and contract terms to predict customers who are likely to churn in the future. Armed with this insight, Adobe can proactively help customers remedy their challenges, increase their productivity and gain better results with their solution – ultimately preventing customers from churning.
- **Quickly and easily act on insights:** Many email marketers lack an integrated analysis of their campaigns' effectiveness, making it hard to adjust what's not working. Addressing this challenge, Adobe Campaign's dynamic reporting presents actionable data in real-time and visualizes email campaign insights that don't require a data science background. Email marketers can now get even more granular with the ability to drill-down via any dimension and adjust the report with a drag-and-drop interface. This quickly determines high-performing email campaigns and those that need adjustments. Dynamic reporting is available now and extends the functional capability of Adobe Analytics Cloud's [Analysis Workspace](#) capability directly into Adobe Campaign.
- **Create multilingual email campaigns:** Gone are the days of painstakingly creating individual email campaigns for each and every language needed to reach consumers. Adobe is helping marketers seamlessly scale their campaigns across the globe with integration between Adobe Campaign and Adobe Experience Manager. Email marketers can now author and translate compelling, personalized multilingual emails directly in Experience Manager and seamlessly orchestrate and deliver the emails via Adobe Campaign.
- **Send well-designed emails:** Adobe is making it easier for email marketers to design emails by adding 18 new, out-of-the-box templates. These templates are mobile-optimized, beautiful layouts that can easily be customized with brands' content to ease the process of designing emails from scratch. The templates include new customer welcome and reengagement emails, among others.

Adobe Campaign, part of Adobe Marketing Cloud, enables the orchestration and delivery of contextual email and cross-channel marketing campaigns to fuel meaningful customer experiences with scalability and ease. More than 850 customers power their engagement strategy with Adobe Campaign, including AccorHotels; BP Global; Christian Dior; Electronics for Imagining; HD Supply; Heathrow Airport Limited; L'Occitane; Renault; Scandinavian Airlines; Sephora; Travelocity; True Value; UBS; and more.
