Adobe Creative Cloud Propels Video Forward at NAB 2017

- **Latest Release Features New Capabilities in AI, VR, Motion Graphics, Live Animation and Audio**
- **Adobe After Effects CC integration with Indic languages to offer workflow benefits to Indian users**

New Delhi — April 20, 2017 — Ahead of the National Association of Broadcasting (NAB) conference, Adobe today announced a major update for video in Adobe Creative Cloud to help filmmakers and video producers collaborate and streamline video workflows. The Creative Cloud release, available today, delivers new features for graphics and titling, animation, polishing audio and sharing assets; support for the latest video formats, such as HDR, VR, and 4K; new integrations with Adobe Stock; and advanced artificial intelligence capabilities powered by Adobe Sensei. Announced at Adobe Summit 2017, Adobe Experience Cloud also allows brands to deliver connected video experiences across any screen at massive scale, while analyzing performance and monetizing ads.

Technology advancements and exploding consumer demand for impactful and personalized content require video producers to create, deliver and monetize their video assets faster than ever before. From the largest studio to next generation YouTubers, a scalable, end-to-end solution is required to create, collaborate and streamline video workflows with robust analytics and advertising tools to optimize content and drive more value.

"I've been using all of the Adobe creative programs as part of my visualization process since the early days in movies including *The Aviator*, *Avatar* and *Hugo*," said Rob Legato, a three-time Academy Award winner and VFX supervisor of *The Jungle Book*. "Over the years, technology has improved steadily, largely due to Adobe's groundbreaking innovations such as Dynamic Link between Adobe Premiere Pro and After Effects, Cinema 4D integration with After Effects, and native workflows. I rely on Creative Cloud to help me pre-visualize and freely experiment on all my films, creating an opportunity to take our creative process to the next level."

"Our heritage is taking complex challenges and simplifying them so you can concentrate on storytelling and professional, quality work," said Steven Warner, vice president of digital media at Adobe. "The newest Creative Cloud video release integrates the advanced science of Adobe Sensei to make common tasks faster and easier. All video producers - whether they're part of the major media companies or up and coming YouTubers - can now bring their creative vision to life without having to be motion graphics or audio experts."

Attendees at this year's NAB can get a closer look at the newly available features and hear from industry experts at the Adobe booth (#SL4010, South Hall in the Las Vegas Convention Center) and at over 140 partner booths from April 22-27.

New Capabilities Power Creativity From Start to Finish

The new capabilities in Creative Cloud video tools include:

- **Motion Graphics Templates** now bring the power of After Effects to Premiere Pro through easy to use templates, allowing creators to add beautiful titles, animations and lower thirds to their videos and create custom motion graphics templates which can be shared via Creative Cloud Libraries.
- **Essential Sound Panel** in Premiere Pro lets users make audio mixes and sound improvements that in the past would have required a dedicated session by an audio engineer.
- **Camera Shake Deblur** in After Effects rescues unusable footage by reducing motion blur that often occurs with camera shake.
- **Character Animator (beta)** continues to invent the future of live animation with new technology that now animates multiple puppets created in Adobe Photoshop CC or Adobe Illustrator CC, and embraces full body animation with new walk cycles.
- **Team Projects (beta)** allows Creative Cloud for teams or enterprise members to have a secure cloud-first collaborative workflow with new support for Dynamic Link and Adobe Media Encoder to streamline collaboration.
- **Ambisonic audio in Premiere Pro** expands on its best-in-class native support for VR with positionally-aware audio for VR enabled platforms like YouTube and Facebook.
- **Hundreds of third-party integrations** including Apple touch bar support for MacBook Pro and new Microsoft Surface Dial functionality in Premiere Pro with shuttle control in the timeline as well as changing hot float and text values.

Integration of Indic language with Adobe After Effects CC

As a new addition, Adobe After Effects CC, now enables creation of text layers containing Indic languages, and animate them with all its cool features, opening new possibilities. This capability is provisioned through the Adobe World Ready Composer, which also powers Adobe Premiere Pro, Adobe Photoshop and Adobe InDesign. The languages supported currently are Hindi, Marathi, Gujarati, Tamil, Punjabi, Bengali, Telugu, Oriya, Malayalam, and Kannada. In addition to this, After Effects also supports Arabic and Hebrew in the RTL type setting.

Powered by Sensei

Leveraging Adobe Sensei, Adobe's artificial intelligence and machine learning framework, users can now automatically normalize audio loudness across an entire timeline with a single click in Premiere Pro or Audition. In Character Animator, Sensei applies complex algorithms in real time to ensure a puppet's lip sync is perfect. Within Adobe Experience Cloud, a video recommendation engine learns from hundreds of billions of online video consumption points to surface for audiences the most relevant content.

Integration with Adobe Stock

Deeply integrated into Creative Cloud workflows, customers have access to millions of Adobe Stock video assets, including 4K and HD, and the ability to search and scrub through video directly in the application. New to this release, editors looking to sell their work can now effortlessly contribute to Adobe Stock through the Destination Publish workflow inside Premiere Pro and Adobe Media Encoder, and reach millions of creative buyers. Adobe's Destination Publishing already supports the world's top social video sites, publishing to YouTube, Facebook, Twitter and Behance in one easy step.

"I have been shooting, editing and uploading stock footage for over a decade. The new ability to contribute to Adobe Stock straight from Premiere Pro is an incredibly valuable tool that makes uploading and selling stock much quicker and easier to do. This new feature is a true game-changer for stock footage producers," said Robb Crocker, CEO of Funnelbox and author of *Stock Footage Millionaire*.

Introducing Pond 5 for Adobe Stock

Additionally, Adobe today announced a partnership with [Pond5](#) further expanding the video offering in Adobe Stock. Sourced from an international community of artists across a mix of modern, highly sought after content

themes, such as lifestyle, recreation, sports, cinematic and aerial footage, the addition of Pond5 video library will give video producers and designers access to one of the industry's largest and fastest-growing collections – all natively integrated into Creative Cloud applications. As part of the Adobe partnership, Pond5's contributors will also be able to reach an even bigger market of creative buyers. (See blog post for more details.

Integration with Adobe Experience Cloud

As the needs of video creators – from creative agencies to media companies – change to reflect a data-driven future, Adobe Experience Cloud benefits the entire video journey, from delivery, to measurement and monetization across screens. Through Adobe's TV Media Management platform [link], media companies and broadcasters can leverage analytics to give advertisers true audience-based targeting and more accurate forecasting. Adobe Analytics Cloud enables the measurement of performance video content published to social media channels within Premiere Pro and ensures video ads are targeted and forecasted with a high degree of accuracy.

Adobe Advertising Cloud bridges the gap between traditional TV and digital video advertising, streamlining the ad planning and buying process, enabling deeper collaboration with creative agencies through dynamic creative optimization (DCO), and ensuring maximum brand safety for video ads with the most third party integrations in the industry.

Pricing and Availability

The new features for Adobe Creative Cloud announced at NAB are now available with the latest version of CC 2017. The company is offering Adobe Creative Cloud for U.S. \$49.99 a month.
