Adobe releases Experience Design CC - Beta for Windows 10

NEW DELHI — January 04, 2016 — Responding to the growing need and interest from a large base of user experience designers using Windows platform, Adobe announced the release of Adobe Experience Design CC (Beta); an end-to-end solution tailor-made for Windows 10. Adobe's first Universal Windows Platform (UWP) application delivers host of features for designing and prototyping websites and mobile apps including XD's innovative repeat grid tool for speeding up layout of design elements.

Adobe Experience Design CC (Beta) for Windows 10 comes with intuitive features and allows users to export assets from their XD document as PNGs and experience the prototype on either their desktop or through the XD mobile app. Currently, the tool delivers core XD feature set for designing, prototyping and sharing user experiences, which will be combined with new capabilities including touch and pen in the next update. The company is committed to delivering updates to XD on Windows 10 every month, and aims to bring parity across the macOS and Windows 10 versions as early as possible.

In addition to announcing the Adobe Experience Design CC - Beta for Windows 10, Adobe also announced new in Adobe XD CC for iOS and Android, primarily responding to the feedback received from the users over time. Key updates include functionalities to:

- Browse and open XD documents saved in Creative Cloud Files
- View XD documents in offline mode
- Browse all artboards in an XD document
- Turn hotspot hints on or off
- Share the current screen as an image

For the next few months Adobe would be focused on responding to feedback, fixing bugs and continuing to enhance performance – over and above adding new features across macOS and Windows 10 versions of XD; which is aligned with the announcements made at MAX, including designer collaboration and developer hand-off capabilities.
