# Adobe Document Cloud and Box Team Up to Transform Digital Document Processes

## Industry Leaders will Bring Enterprise-Grade Content Collaboration to Work with PDFs and Electronic Signing

**London, UK. — April 26, 2016** — Adobe (Nasdaq:ADBE) and Box (NYSE:BOX) today announced they are teaming up to make working with digital documents in the enterprise an effortless experience. The companies are announcing a set of powerful new integrations that seamlessly connect workflows between [Adobe Document Cloud](#), [Adobe Sign](#) and [Box](#)'s secure enterprise content collaboration platform.

Digital transformation has quickly become a strategic imperative in almost every industry, requiring organisations to transform their business processes and reimagine how they connect with customers, partners and employees. More and more, this means managing massive amounts of content and digital files that are home to mission-critical data and intellectual property. With more than two billion PDFs alone in Box today, these new integrations from Adobe and Box will help enterprises across the globe organise, manage and collaborate on their most valuable content.

"Organisations worldwide rely on Adobe Document Cloud and Adobe Sign to bring speed and efficiency to processes involving digital documents," said Bryan Lamkin, executive vice president and general manager, Digital Media at Adobe. "Our mission is to simplify and modernise those processes for businesses and people wherever and however they work. Our collaboration with Box will help advance this cause, whether it's reviewing a new employee benefits handbook with HR stakeholders, sharing the latest creative mockup with your global ad agency, or sending a sales contract for signature by the CEO."

"Box is incredibly excited to bring new value to our customers by connecting our rich collaboration platform and enterprise-grade security with Adobe Document Cloud," said Aaron Levie, cofounder & CEO, Box. "We are focused on building a powerful centralised platform that secures and connects the content that people use every day to get their jobs done. With more than six billion digital and electronic signature transactions a year in Adobe Document Cloud and Adobe Sign, today's news is a critical step in helping customers effortlessly share, access and securely manage their information."

The new integration will enable Adobe and Box users to:

- **Quickly access and save files from Adobe apps.** Users will be able to open and complete essential tasks on PDF files in Box using Adobe Acrobat DC and the free Acrobat Reader. Annotations and edits will be saved back to Box in real-time, ensuring the latest version of the document is always accessible and avoiding version control issues. Additionally, users will have the option to select Box as their preferred cloud provider from the iOS document picker within Acrobat Reader mobile on iPhone and iPad, making the process just as seamless when working on the go.
- **Edit PDFs directly from Box.** When working in Box and previewing a PDF file, with just a few clicks users will be able to open documents directly in Acrobat DC and make edits that are automatically updated in Box. With the integration, businesses will be able to seamlessly leverage Acrobat to work with PDFs, while benefiting from Box's robust collaboration features, as well as its world-class security and control capabilities.
- **Speed business with e-signatures.** Users will be able to open Box files directly in Adobe Sign to provide an electronic signature on important contracts and paperwork. The feature will eliminate the hassle of file downloads, transfers and

duplication of content by centralising all updates in Box and will make it easier than ever to circulate content to the right people. This builds on an existing integration between Adobe Sign and Box, which enables users to select files for e-signature from their Box account via the Adobe Sign web service.

At the heart of Adobe Document Cloud is Adobe Acrobat DC, the world's best PDF solution; Adobe Sign, the leading e-signature solution that allows anyone to electronically sign and send documents from any device; and powerful companion mobile apps. Acrobat, together with Acrobat Reader, is one of the most widely distributed pieces of software, used on over a billion desktops and mobile devices worldwide.

#### **Availability**

The ability to add a Box account to Acrobat DC and Acrobat Reader on desktop is expected by the end of May 2016. The ability for Acrobat Reader mobile users on iPhone and iPad to select Box as their preferred cloud service from the iOS document picker is expected by the end of June 2016. Initial access to Acrobat DC and Adobe Sign from the Box website is expected by the end of May 2016, with deeper integration expected by fall 2016.
