

PSLT – Adobe Experience Manager: On-premise Software (2020v1)

1. **License for Development Software.** Customer may install and use a reasonable number of copies of the On-premise Software in a development environment only, strictly for testing and quality assurance purposes and not for production purposes.
2. **Use of Fonts.** Except as otherwise detailed in the Agreement, Adobe’s proprietary or licensed fonts are embedded with the Products and Services only for use within the user interface of the Products and Services.
3. **Remote Verification.** The On-premise Software may contain functionality that allows Adobe to receive reports about Customer’s number of active Instances of the On-premise Software for the purpose of verifying Customer’s compliance with the terms of this Agreement. Adobe does not receive any data regarding any individual’s use of the On-premise Software, nor does Adobe have the ability to remotely disable the system or monitor any level of activity or transactions, other than receiving a notification that an Instance is active. Customer may disable this functionality at Customer’s discretion. Instructions for disabling the remote verification will be provided to Customer by Adobe after Customer submits a support ticket to Adobe requesting such instructions.
4. **Product Description.** Product limitations are detailed in the Product Description for Adobe Experience Manager On-premise Software found here: <https://helpx.adobe.com/legal/product-descriptions.html>.
5. **Additional Claims.** Customer’s indemnification obligations set forth in the General Terms will also apply to Claims that relate to or arise from any Customer Content. The additional Claims in this section are treated as Data Privacy Claims or Other Claims as described in the applicable General Terms. This section 5 is applicable only to the extent that Customer has licensed On-demand Services add-ons for use in connection with the On-premise Software.
6. **Definitions.**
 - 6.1 **“Instance”** means one copy of the On-premise Software instantiated and running within a java virtual machine process on one physical Computer or virtual environment. Each Instance can be designated as either an Author Instance or Publish Instance, but each will be counted separately as one Instance.
