FOR IMMEDIATE RELEASE

# Adobe Adds New Integrations for Document Cloud in Microsoft Teams, including Adobe Sign and Acrobat

Hong Kong — July 13, 2021 — Adobe (Nasdaq: ADBE) has announced [new integrations for Adobe Document Cloud in Microsoft Teams](#) as the next milestone in the company's partnership to advance modern productivity. Adobe Sign is Microsoft's preferred e-signature across the company's entire portfolio that features more than 180 million commercial active users. Now, the more than 100 million users worldwide who collaborate with co-workers, suppliers, and customers in Teams can access the world's best e-signature and PDF tools right inside Teams.

According to the [Forrester Total Economic Impact Study](#) commissioned by Adobe in 2019, when it comes to organizations using [Adobe Document Cloud and Microsoft](#), work simply gets done faster and more efficiently with businesses reporting up to US\$9.1 million and 65 hours/year per employee in savings.

Here are the integrations for Document Cloud in Microsoft Teams:

### **A secure, personal touch to approvals and virtual signing experiences**

Over the past year, there has been a big shift in how critical e-signatures have become among individuals and companies. It's led to an over 200 percent year over year growth for Adobe Sign between February 2020 and February 2021. Now, Microsoft has added Adobe Sign, its preferred e-signature solution across the entire Microsoft portfolio, to **the new Microsoft Teams Approvals app**. Adobe Sign is the only truly native e-signature solution within Teams and the first e-signature solution available in the Approvals app. Users can quickly and securely add Adobe Sign e-signatures to documents that need to be approved — directly inside Approvals in Teams. They can also easily access and manage all e-signatures and other approval requests in a secure, authenticated, and auditable way.

Nonetheless, at the heart of all document experiences are those irreplaceable face-to-face interactions. The global pandemic changed the in-person signing experience forever. With the new **Live Sign in Microsoft Teams**, only Adobe Sign is delivering on a digital document experience in Teams that feels like users are signing in-person, with an added layer of trust and security. For example, a doctor can consult with a patient on a Teams video call about an upcoming surgical procedure while capturing their e-signature for various consent forms — all without leaving Teams.

### **Seamlessly collaborate on documents**

An easier way to get on the same “page” is critical no matter what users do. Creative professionals and clients often struggle to match the right comment with the right iteration of a creative proof. An agency that's bidding for a major project needs to streamline their responses across different stakeholders before sending the request for proposal back to a potential client.

Millions of businesses worldwide rely on Adobe Acrobat to bring the full power of PDF to Microsoft 365 formats. With [Adobe Acrobat for Microsoft Teams](#), multiple Acrobat users can comment and annotate on PDFs stored in SharePoint, OneDrive, or Teams without ever leaving Teams. Comments are captured in a single PDF that can be stored.

When the team is hiring for a new position, users can review candidate resumes with a colleague in Teams, using Adobe Acrobat's [commenting and annotation tools](#) to highlight elements of a particular resume that the colleague might find interesting. They'll immediately get notifications in Teams once the colleague replies to their comments. The resume that includes both comments can then be stored in SharePoint or OneDrive.

While this is an important milestone, users can expect to see more work between Adobe and Microsoft across Adobe Document Cloud and other Adobe solutions, which are at the centre of the future of work.
