Create mobile apps

On-device debugging

• • •

Multidevice inspection

• • •

CFML-based mobile app development

• • •

Develop faster

Search your application for specific tags, attributes, and text, regardless of file location

• • •

Tab to the next logical tag, function or control statement within your code

• • •

Set "to do" and "fix me" points within your code

• • •

Access methods and attributes within a ColdFusion component (CFC) that have not yet been created

• • •

Access ordered code assist for CFML, CFScript, HTML, JavaScript and CSS

• • •

Use introspection to complete lines of code in CFML, HTML, JavaScript, SQL and CSS

• • •

Generate CFCs for object-relational mapping without writing code

• • •

Use Adobe Flash Builder 4.6 (included) to introspect CFCs and automatically generate corresponding ActionScript objects

• • •

Prevent errors

Indicate an application start page to execute first when running and debugging applications

• • •

Launch and step through applications directly within the IDE

• • •

Restructure code when you rename a CFC, function or variable

• • •

View rendered pages using the embedded browsers

• • •

Use the tag editor to identify required tag attributes and assign values

• • •

Manage your ColdFusion server

Quickly access any web services available from ColdFusion server	•	•	•
Access a remote shared codebase	•	•	•
Monitor ColdFusion logs in real time while executing applications	•	•	•
Start and stop ColdFusion servers	•	•	•
Deploy code with FTP/SFTP support	•	•	•

Customize your environment

Create customized keyboard shortcuts or modify existing ones	•	•	•
Apply code formatting based on personalized, predefined rules	•	•	•
Install ColdFusion Builder 2 as a plug-in to any Eclipse 3.6 64-bit environment	•	•	•
Save blocks of frequently used code for reuse	•	•	•
Create or install extensions written in CFML	•	•	•
Use tag libraries for ColdFusion 7, 8, 9 or 10	•	•	•

Work with data and files

Open files in ColdFusion Builder directly from the operating system	•	•	•
Browse your local file system from ColdFusion Builder and open any type of file	•	•	•
Explore the server file system or view the structure of database tables	•	•	•
