ColdFusion - Transformation over the years

ColdFusion Roadmap

The intended future features described in this document are under consideration by Adobe and are not commitments for future products, technologies, or services. The roadmap is subject to change at Adobe Systems' sole discretion and Adobe Systems does not guarantee the features or release dates.

ColdFusion Roadmap

Project Stratus *

Cloud

- Extremely productive APIs to interact with services on both AWS and Azure

Micro services

- Tiny installer of under 200MB
- Lean footprint with startup time of ~5 seconds

Productivity

- Build your own runtime and script all deployments via CI/CD pipeline

Updates

ColdFusion Builder on VSCode

ColdFusion on AWS Lambda & Azure function

Project Fortuna *

Cloud

- Deeper support of services on AWS and Azure. Extend multi-cloud to GCP

Micro services

- Easily architect microservice patterns
- PMT to monitor microservices

Productivity

- Ability to easily build & deploy REST services
- Centralized configuration server

2020 2021 2022

* Every major release will include ColdFusion server and ColdFusion Builder

Adobe's commitment to ColdFusion
