

CREATIVE CLOUD FOR ENTERPRISE

Unleash your organisation's creativity with Adobe Creative Cloud for enterprise.

The admin console puts you in control.

Make the most of Adobe Creative Cloud for enterprise.

Creative Cloud for enterprise provides manageable desktop and mobile tools and services for seamless design workflow with automation and IT integration capabilities, within a secured business environment.

Creative Cloud for enterprise offers you a highly scalable solution that can grow with your organisation, it provides exclusive tools and services to help your organisation collaborate effectively and organise its creative work in a smarter way.

The Adobe admin console makes it easier for you to manage the Creative Cloud licences for your organisation and offers new ways to automate user management and stay in control.

What is the Adobe admin console?

The admin console is the central hub where you can manage all of your organisation's Adobe products. Hosted by Adobe and accessible via your web browser, it gives you an instant overview of who's assigned to your Adobe products and services and makes it easy to add licenses and install updates.

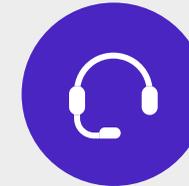

The admin console gives you:

Enterprise-grade security

Advanced user authentication and user management

Enterprise support and unlimited expert sessions

Multiple admin roles for better management

Better user management

Visit www.adobe.com/go/10120-Brochure-CCE-EN and watch the videos to see everything you can do with the admin console, or contact your Adobe reseller for more information.

User and licence management made simple.

The admin console provides a quick and clear overview of exactly who your organisation's Adobe products and services licences are assigned to. It also displays the agreement anniversary date, when all your yearly subscription licences co-terminate and need to be renewed. Having a single renewal date significantly reduces paperwork and saves a lot of time.

Assign account types that offer better security and control.

Creative Cloud for enterprise offers two account formats that are better suited to businesses. The first one is an Enterprise ID, which is an account owned by the organisation, not the end user. You can set higher password requirements and a time period after which the password expires - the password is still kept by Adobe. A Federated ID is the same as the Enterprise ID, but the passwords remain within your organisation. Additionally, you can use the CC User Sync tool to link your internal Active Directory to the admin console and combine it with Single Sign-on, so that your users and their data are automatically tracked and synchronised.

These measures and more ensure that Creative Cloud for enterprise complies with the strict ISO 27001 standard on security.

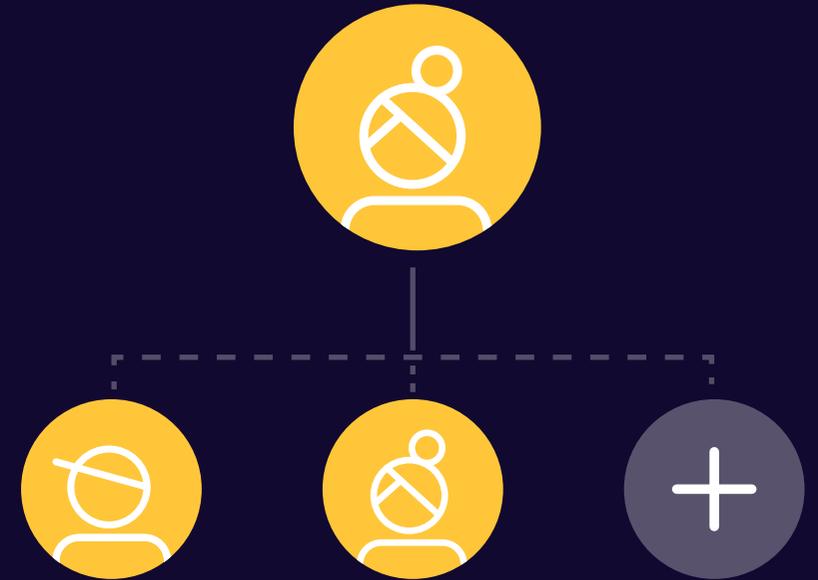

If an end user leaves your organisation and their licence is revoked, they will immediately lose access to the software and the files stored in Adobe's cloud.

Easily add and manage users.

Before one of your people can use Creative Cloud, you need to add them as a user in the admin console. Managing a lot of users becomes much easier through User Groups and Product Groups.

A User Group is a bundle of multiple users that can be used to designate specific products in bulk. For example, you can create a User Group called 'print designers', add all print designers to it and grant everyone in the group a CC All Apps licence.

A Product Group is a subset of licenses and configurable services. First, choose the Adobe product which you'd like to configure and set the maximum amount of consumable licenses for that product. Then choose which appropriate cloud services you'd like to enable for your Product Group. Once created, you can assign individual users or complete User Groups to your Product Group. You can also fragment the administration of the CCE admin console - for example, you can set separate admin roles for specific user groups, product groups, software deployment or support.

Stay up to date, your way.

Order extra licences as your organisation grows.

When you need to organise additional Creative Cloud licences for new starters you can order them directly from the admin console. Navigate to your product overview, select the additional applications you need from the product catalogue and send your order directly to your Adobe account manager or authorised reseller. When your order is processed and confirmed the new licences will appear in your admin console and from there you can assign them to new starters.

Manage updates, your way.

With Adobe Creative Cloud, new technology and innovation is made available to users the moment it's released. Which means it's important to keep your team's software up to date so everyone can take advantage of the latest versions.

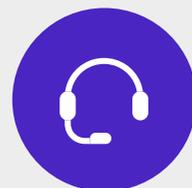

There are several ways of managing updates. You can opt to enable users to update their own software directly or build a completely new package of updates in the admin console

that can be installed on every computer using solutions like Microsoft SCCM. You can even use Adobe's Remote Update Manager to trigger the update process on all client machines using a command-line interface.

Better control over enterprise assets.

Creative Cloud Storage and Creative Cloud Libraries make it easy to share assets with others. However, Creative Cloud for enterprise also gives you control of how you share assets as an organisation. A recent feature available when using Enterprise or Federated IDs enables you to restrict sharing public links to online assets with users outside your organisation. Which gives you better control over asset availability.

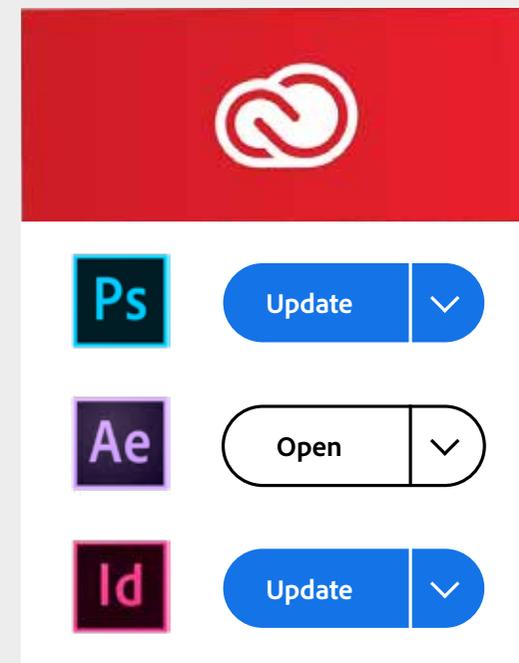

Creative Cloud for enterprise meets the toughest market demands by using a digital ecosystem where IT has control, in combination with a Federated ID and dedicated encryption. This approach is currently used successfully by local governments, multi-nationals and banks.

Get expert support when you need it.

With Creative Cloud for enterprise, technical support from Adobe experts is always close at hand. A personal onboarding call is automatically included with a CCE licence. This hour-long remote session with an onboarding specialist from Adobe will help you get started with the admin console. The expert can answer any questions about user management, automation, software deployment and other technical topics.

Once your organisation is up and running, you can also schedule 'Expert Sessions' about IT or creative subjects. These half-hour one-to-one sessions enable users to discuss a specified topic, whether it's about using layers in Photoshop or building a new installation package. Your agreement entitles you to unlimited expert sessions a year – book them through our Business Support team or directly through the admin console.
